# Miniature resistance thermometer For sanitary applications Model TR21-A, with flange connection

WIKA data sheet TE 60.26

### Applications

- Sanitary applications
- Food industry
- Beverage industry
- Bio and pharmaceutical industry, production of active ingredients

### **Special features**

- Sensor can be calibrated without having to open the process or disconnect the electrical connections
- Compact design for space-saving fitting
- Simple and fast connection using an M12 plug connector
- Output signal: Pt100 or 4 ... 20 mA via PC-programmable transmitter
- Materials and surface finish quality in accordance with standards of hygienic designs

Resistance thermometer model TR21-A with VARIVENT<sup>®</sup> connection

### Description

The model TR21-A resistance thermometer is used for temperature measurement in sanitary applications. These thermometers are equipped with thermowells, the process connections of which meet the stringent requirements for hygienic measuring points in terms of material and design.

For easy calibration or maintenance, the sensor is removable without having to break into the process or disconnect the electrical connection. Thus hygiene risks can be minimised and downtimes can be reduced.

WIKA data sheet TE 60.26 · 11/2011

Data sheets showing similar products: Thermowells for sanitary applications; model TW22; see data sheet TW 95.22 Resistance thermometer, with flange connection; model TR22-A; see data sheet TE 60.22 Resistance thermometer, for orbital welding; model TR22-B; see data sheet TE 60.23 Miniature resistance thermometer, for orbital welding; model TR21-B; see data sheet TE 60.27 Miniature resistance thermometer, with welded flange connection; model TR21-C; see data sheet TE 60.28

The spring-loading, integrated into the union nut, guarantees the contact between the sensor tip and the bottom of the thermowell and thus ensures a short response time and lasting high accuracy.

The welded junction between the thermowell and the flange makes the use of a sealing as additional material in those areas redundant which are in contact with the product.

Part of your business

### **Specifications**

Output signal Pt100	
Temperature range	Measuring range -50 +150 °C, -50 +250 °C
Measuring element	Pt100 (measuring current: 0.1 1.0 mA) standard measuring resistor Pt100 (measuring current: 0.1 1.0 mA) face-sensitive measuring resistor <sup>1)</sup>
Connection method	3-wire 4-wire
Tolerance value of the measuring element <sup>2)</sup> per DIN EN 60751	Class B Class A Class AA

Output signal 4 20 mA	
Temperature range	Measuring range -50 +150 °C, -50 +250 °C <sup>3)</sup>
Measuring element	Pt100 (measuring current: 0.5 mA) standard measuring resistor
	Pt100 (measuring current: 0.5 mA) face-sensitive measuring resistor 1)
Connection method	3-wire
Sensor tolerance value <sup>2) 4)</sup>	Class B
per DIN EN 60751	Class A
	Class AA
Measuring span	minimum 20 K, maximum 300 K
Basic configuration	Measuring range 0 150 °C, other measuring ranges are adjustable
Analogue output	4 20 mA, 2-wire
Measuring deviation per DIN EN 60770, 23 °C ±5 K	0.2 % (transmitter) <sup>4)</sup>
Linearisation	linear to temperature per DIN EN 60751
Linearisation error	±0.1 % <sup>5)</sup>
Switch-on delay, electrical	< 10 ms
Signalling of sensor burnout	configurable: NAMUR downscale < 3.6 mA (typically 3 mA) NAMUR upscale > 21.0 mA (typically 23 mA)
Sensor short-circuit	not configurable, generally NAMUR downscale < 3.6 mA (typically 3 mA)
Load RA	RA $\leq$ (UB - 10 V) / 0.023 A with RA in $\Omega$ and UB in V
Effect of load	± 0.05 % / 100 Ω
Power supply	DC 10 35 V
Max. permissible residual ripple	10 % at 24 V / maximum 300 Ω Load
Power supply input	protected against reverse polarity
Power supply effect	± 0.025 % / V
Electromagnetic compatibility (EMC)	2004/108/EC, EN 61326 emission (Group 1, Class B) and interference immunity (industrial application) <sup>6)</sup>
Temperature units	configurable °C, °F, K
Info data	TAG No., descriptor and message can be stored in transmitter
Configuration and calibration data	permanently stored in EEPROM
Electrical connection	M12 x 1, 4-pin circular connector

-40 +85 °C
IP 68 <sup>7)</sup> / IP 69K per IEC 529 / EN 60529 The stated ingress protection only applies when plugged in using mating connectors that have the appropriate ingress protection.
t <sub>50</sub> < 4.7 s t <sub>90</sub> < 12.15 s
Case and union nut: stainless steel 1.4571 (316Ti) Spring: stainless steel 1.4310 Measuring insert: stainless steel 1.4571 (316Ti)

Readings in % refer to the measuring span

For a correct determination of the overall measuring error, both sensor and transmitter measuring deviations have to be considered.

- Face-sensitive measuring resistors, through their small design they serve to reduce the heat dissipation with short insertion lengths. Available for the temperature range -50 ... +150 °C in classes A and B. For thermowell insertion lengths of less than 11 mm, face-sensitive measuring resistors are generally used.
- For detailed specifications for Pt100 sensors, see Technical information IN 00.17 at www.wika.com. 2)
- 3) The temperature transmitter should therefore be protected from temperatures over 85 °C
- 4) For measuring spans smaller than 50 K additional 0.1 K
- 5)  $\pm$  0.2 % for measuring ranges with a lower limit less than 0 °C
- 6) Use RTDs with shielded cable, and ground the shield on at least one end of the lead, if the lines are longer than 30 m or leave the building.
- 7) 1 MWs/ 24 h
- 8) Measurement in accordance with DIN EN 60751

Thermowell model TW22	
Surface finish	Standard: $R_a$ < 0.8 $\mu m$ Optional: $R_a$ < 0.8 $\mu m$ electropolished, $R_a$ < 0.4 $\mu m,$ $R_a$ < 0.4 $\mu m$ electropolished
Materials	Stainless steel 1.4435 (316L)
Connection to the thermometer	G 3/8"
Thermowell diameter	6 mm, optional: probe tip reduced to 4.5 mm (from U1 > 25 mm)
Insertion length U1 <sup>8)</sup>	Standard: 25, 50, 75, 100, 150, 200 mm other insertion lengths are available as options
Pressure ratings	cf. table of dimensions

8) For the TR21-A design without thermowell, the insertion length is defined by the dimension A (see Dimensions in mm). The thickness of bottom of the thermowell can be neglected for dimensioning. It is offset by the spring travel of the measuring insert.
